EDUCATION

Jomo Kenyatta University of Agriculture and Technology

B.Sc. Mathematics & Computer Science (Pure Mathematics Major) — Graduated

EXPERIENCE

Full Stack Engineer

July 2025 – Present

ORIGIN

- Actively involved in building and launching Origin's own products as a startup, from ideation to development, contributing across both technical and strategic areas.
- Driving the company's technical vision by architecting solutions that balance clean design, robust architecture, and business impact.
- Designing and developing full-stack web applications delivering responsive, accessible, and SEO-optimized user interfaces.

Stack: TypeScript.

Software Developer

Dec. 2024 – Mar. 2026

KIFWA

- Engineered secure and scalable clearing and forwarding web applications, digitizing manual workflows and reducing processing times by 35%.
- Built a customs bond application platform enabling agents to submit and manage bond applications with automated premium calculations, certificate generation, and payment processing.
- Implemented payment gateways including M-Pesa, streamlining the whole process for Kenya's clearing agents, insurance companies, and importers.
- Optimized frontend components, reducing load times and improving user experience across multiple devices.

Stack: Shadcn, NextJs, Keycloak, React, Postman.

Frontend Developer

Mar. 2025 – June 2025

Pacaya

- Developed SEO-optimized user interfaces that increased search visibility and boosted organic traffic by 25%.
- Integrated real-time activity tracking, increasing user engagement metrics by 40%.
- Collaborated with backend engineers to optimize API performance, reducing client-side latency.

Stack: Next.js, NestJS, Postgres.

Software Developer Intern

May 2023 – Feb. 2024

Furaha Ventures Limited

- Built progressive web applications using Ionic and Angular, integrating IoT sensors and GraphQL APIs for real-time data insights.
- Built and integrated frontend features for IoT-enabled warehouse management systems, enabling real-time tracking of farm produce and reducing wastage.

Stack: Ionic, Angular, GraphQL, Azure, PostgreSQL.

Avionics Intern - Rocketry

Sept. 2023 – Jan. 2024

Nakuja Project | JKUAT & JICA

- Designed IoT-based telemetry systems for Nakuja N-3 rocket, enabling real-time monitoring of critical flight parameters.
- Built parachute deployment system contributing to successful third-generation rocket flight tests.

Stack: Arduino, Raspberry Pi, ESP32, Python, React.js.

Industrial Attachment

May 2023 – Aug. 2023

Nyandarua County Assembly

- Built library management system achieving 40% faster processing speeds and 25% fewer errors.
- Developed HR system automating committee scheduling and attendance recording for MCAs, improving efficiency by 30%.

Stack: PHP, MySQL, Bootstrap.

ADDITIONAL EXPERIENCE

Mentee

April. 2024 – Nov. 2024

KamiLimu

- Selected to be 1 of 38 students from universities in Kenya to be part of the 8-month structured mentorship program.
- KamiLimu is a recovery center for those dangerously addicted to potential. An 8-month multi-award-winning structured mentorship program that aims to upskill ICT students in Kenya to foster their global competitiveness.
- Ideated and designed a project to encourage students to get help from industry experts to complete their projects after hackathons. The project was one of the finalists in the innovation and ICT track.

Skill Gained: Project Management, Public Speaking, Scholarship Writing, Pitching, JavaScript, Git.

Freelance Work

2023 – Present

- Also took on independent freelance work (2023–Present) — Website builds, performance optimization, designs for small businesses, improving lead generation for clients.

FEATURED PROJECTS

KIFWA Clearing Agents Platform [Visit](#) | *NextJS, TailwindCSS, Springboot*

- Multi-tenant platform with three integrated systems for clearing agents, insurers, and service providers — streamlining bond purchases, renewals, and indemnity issuance for 2,000+ licensed clearing agents and member companies.

The Nakuja Project [Visit](#) | *Embedded Systems, PCB Fabrication, Rocketry*

- Avionics and recovery systems for the N-3 sounding rocket. Contributed to subscale system tests, PCB fabrication, and parachute ejection mechanisms.

TECHNICAL SKILLS

Languages: TypeScript, Python, SQL, Java, C/C++, HTML/CSS

Frameworks: React, Next.js, Angular, NestJS, Node.js, Ionic

DevOps & Cloud: Docker, AWS (EC2, S3), PostgreSQL, Keycloak, CI/CD

Tools: Git, REST APIs, GraphQL, Postman, WordPress

Other: Project Management, Data Analysis, Testing
